

The Water-Lubricated Bearing That Has Nothing More To Prove.

It's proven itself for years at sea. No other water-lubricated bearing is used in more vessels worldwide than a Johnson Cutless® Rubber Bearing. It has set industry standards for decades in the harshest working environments, earning the trust of more marine professionals than any other bearing. The performance and operating characteristics of our resilient bearings are unique when compared to other water-lubricated bearings.

Each Cutless® Bearing is manufactured, individually inspected and tested to meet the highest quality standards in the industry. Meets ABS and MIL-DTL-17901C (SH) Class II type bearing specifications. Johnson Cutless® is the original, true Cutless Bearing, and it's available only from Duramax Marine® – the world leader in water-lubricated bearing technology.

Johnson Cutless® is Designed for Unmatched Performance and Long Life.

Engineered geometry optimized for superior performance.

- Prevents shaft whip and absorbs vibration
- Assures maximum water lubrication
- Flushes abrasives away, preventing scoring of shaft

Specially formulated molded nitrile rubber lining.

- Permanently bonded to a precision-machined naval brass outer shell
- Resists oil, grease and chemicals

Proprietary deflection property unique to our engineered rubber lining allows a slight compression set to form a permanent hydrodynamic pocket after break-in.

- Water pocket promotes earlier hydrodynamic film formation
- Pocket significantly reduces friction and wear
- The longer a Cutless® runs the better it gets

Cutless® is a registered trademark of Duramax Marine® LLC
